Website feedback

login/signup page:

- Very well designed, easy to use and understand, easy to look at
- The text on the background image could have the contrast increased a little bit to make it easier to see but its not a huge problem
- Event is the name of the cinema but that's not really a problem relating to the content of the website
- The "do it" and "thanks" boxes when hovering over the sign up and log in buttons aren't necessary/could be changed to something else
- Signup works well
    - The autofill text for the form fields don't scroll with the field
- Login works well

Events page:

- Works well, looks nice, easy to use and understand
- The 'try using the map' link at the bottom takes the user to a broken page
    - The map has a popup that says 'error: the geolocation service failed'
        - The map still works and there are still working location pins

Individual event pages:

- The banner image is broken on all individual event pages
- 'people going' table is broken

My events page:

- Doesn't work, the page isn't found

Find events:

- The find events page is the same map that says 'Error: the Geolocation service failed'
- Since the map takes up the entire screen, you can't easily scroll down because it just zooms the map out/in

Organisation tab:

- Doesn't work

Change account details:

- Doesn't seem to work, redirects back to change account details page with previous info
